

Water body information sheet for water body 23912 in North East Scotland

General details

Water body name:	Water of Dye / Spital Burn
Water body Identifier code:	23912
Length:	9.13 km
Water body category:	River
River basin district:	Scotland
Area advisory group:	North East Scotland
Catchment:	River Dee (Grampian)
Associated protected areas:	River Dee - SPECIAL AREA OF CONSERVATION River Dee (Aberdeenshire) - FRESHWATER FISH (EXISTING)
Associated groundwater:	Clachnaben
Responsible body:	SEPA South Grampian
Heavily modified:	No
Artificial:	No
Typology:	Mid-altitude Small Organic
National Grid Reference:	NO 67049 82428
Latitude:	56.95101
Longitude:	-2.57727

Current status of this water body

Classification results are updated annually, as part of SEPA's commitment to monitor and assess the condition of the environment.

Once the classification is agreed, as part of river basin management planning, the pressures and measures for every water body are reviewed to ensure that they reflect this improved understanding of the environment. Objectives are reviewed as part of the six yearly planning cycle and any proposed changes to objectives will be presented in the draft river basin plans http://sepa.org.uk/water/river_basin_planning.aspx.

This worksheet was produced using the most up to date classification results but the measures, pressures and objectives shown may not yet align to these classification results. Please contact rbmp@sepa.org.uk if you require further information on this water body.

We have classified this water body as having an overall status of Good with Medium confidence in 2012 with overall ecological status of Good and overall chemical status of Pass.

The overall classification of status is made up of many different tiers of classification data. A complete set of classification data for 2012 is shown at the end of this document.

Targets for the future status of this water body

We have set environmental objectives for this water body over future river basin planning cycles in order that sustainable improvements to its status can be made over time, or alternatively that no deterioration in status occurs, unless caused by a new activity providing significant specified benefits to society or the wider environment.

For this water body we have set the overall environmental objectives for the first, second and third River Basin Management Planning (RBMP) cycles as:

Pressures and measures on this water body

We have established an ongoing programme of monitoring in order to identify pressures on our water bodies.

The pressures listed below contribute to this water body's failure to meet good ecological status or potential. River basin planning allows us to plan improvements for particular parameters over time. We have collaborated with others to identify measures which will act to protect or improve our water environment in order that all water bodies reach good status over successive RBMP cycles.

The following table shows our collated information on the pressures on this water body, their causes and the measures which could be introduced to mitigate their effects. We have also indicated the current funding status of the measure; with projected measures being potentially funded and agreed measures having funding in place. Finally, we have included information on the potential or actual owner of the measure, the date it will be effective and information on the justification for extending the deadlines or for setting an alternative objective, where appropriate.

Pressure	As a Result of	Assessment Parameter	Objective	Reasons for Failure
	Measure	Funding	Owner	Effective date
Abstraction	Water collection, purification and distribution	Change from natural flow conditions	Good by 2015	
	Control Abstraction	Projected	Scottish Water	31/03/2020

Footnote – These results show current classification but the measures, pressures and objectives shown may not yet align to these classification results. Please contact rbmp@sepa.org.uk if you require further information on this water body.

Future work

Additional work to identify pressures and to develop and implement measures to mitigate their impacts will continue over subsequent river basin cycles.

Complete classification for this water body in 2012

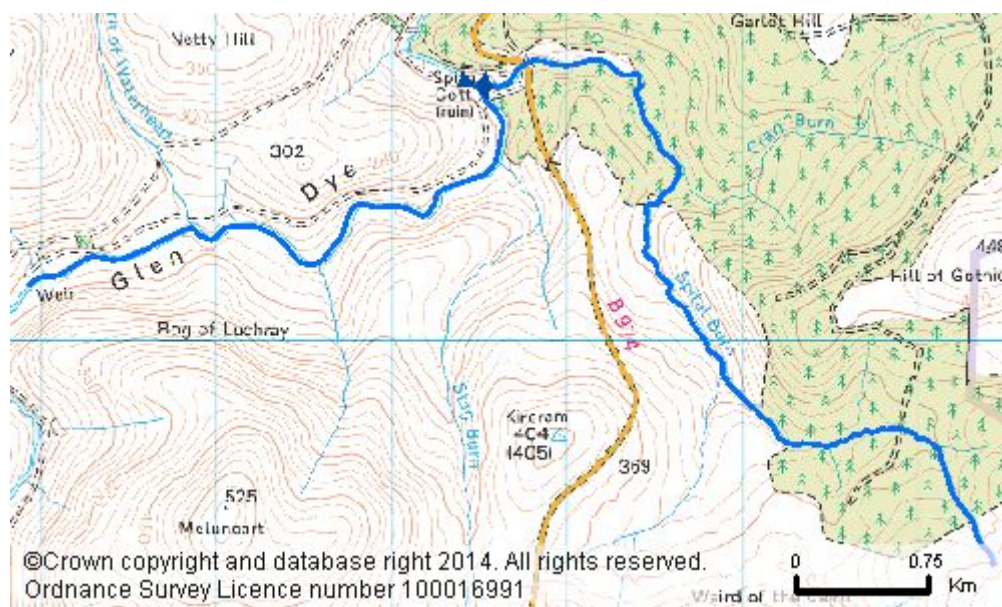

Parameter	Status	Confidence of Class
OVERALL STATUS	GOOD	MEDIUM
Pre-HMWB status	Good	Medium
Overall chemistry	Pass	Low
Priority substances	Pass	Low
Overall ecology	Good	Medium
Physico-Chem	High	Low
Biological elements	High	Medium

Water body information sheet for water
body 23912 in North East Scotland

Parameter	Status	Confidence of Class
Phytobenthos	High	Low
Macrophytes	High	Low
Benthic invertebrates	High	Low
Macro-invertebrates (acid)	High	Low
Macro-invertebrates (RiCT)	High	Low
Macro-invertebrates (ASPT)	High	Low
Macro-invertebrates (NTAXA)	High	Low
Alien species	High	Low
Fish	High	Medium
Fish ecology	High	Low
Fish barrier	High	Medium
Specific pollutants	Pass	Low
Hydromorphology	Good	Medium
Morphology	Good	Medium
Hydrology	Good	Medium
Hydrology (impoundment)	High	Medium
Hydrology (abstraction)	Good	Medium
Regulatory BOD	High	Low
Regulatory ammonium	High	Low
Water quality	High	Low
Morphological pressures	Good	Medium

Location of this water body

You can find the geographical location of this water body by searching on water body ID in the interactive maps at www.sepa.org.uk/water/river_basin_planning.aspx
