

Water body information sheet for water body 6844 in Tweed

General details

Water body name:	Whiteadder Water (Billie Burn confluence to tidal limit)
Water body Identifier code:	6844
Length:	17.00 km
Water body category:	River
River basin district:	Solway Tweed
Area advisory group:	Tweed
Catchment:	Whiteadder Water
Associated protected areas:	Whiteadder Water - SSSI Whiteadder Water (Billie Burn confluence to tidal limit) - UWWTD SENSITIVE AREA (EXISTING) River Tweed - SSSI Whiteadder Water - FRESHWATER FISH (EXISTING) Lothian / Borders - NITRATE VULNERABLE ZONE River Tweed - SPECIAL AREA OF CONSERVATION
Associated groundwater:	Fogo
Responsible body:	SEPA Borders
Heavily modified:	No
Artificial:	No
Typology:	Mid-altitude Medium Siliceous
National Grid Reference:	NT 89829 54723
Latitude:	55.78571
Longitude:	-2.16376

Current status of this water body

Classification results are updated annually, as part of SEPA's commitment to monitor and assess the condition of the environment.

Once the classification is agreed, as part of river basin management planning, the pressures and measures for every water body are reviewed to ensure that they reflect this improved understanding of the environment. Objectives are reviewed as part of the six yearly planning cycle and any proposed changes to objectives will be presented in the draft river basin plans http://sepa.org.uk/water/river_basin_planning.aspx.

This worksheet was produced using the most up to date classification results but the measures, pressures and objectives shown may not yet align to these classification results. Please contact rbmp@sepa.org.uk if you require further information on this water body.

We have classified this water body as having an overall status of Moderate with High confidence in 2012 with overall ecological status of Moderate and overall chemical status of Pass.

The overall classification of status is made up of many different tiers of classification data. A complete set of classification data for 2012 is shown at the end of this document.

Targets for the future status of this water body

We have set environmental objectives for this water body over future river basin planning cycles in order that sustainable improvements to its status can be made over time, or alternatively that no deterioration in status occurs, unless caused by a new activity providing significant specified benefits to society or the wider environment.

For this water body we have set the overall environmental objectives for the first, second and third River Basin Management Planning (RBMP) cycles as:

Year	2012	?	?	?
Status	Moderate	?	?	?
Year	2012	2015	2021	2027
Status	Moderate	Pass	Pass	Pass

Pressures and measures on this water body

We have established an ongoing programme of monitoring in order to identify pressures on our water bodies.

Water body information sheet for water body 6844 in Tweed

The pressures listed below contribute to this water body's failure to meet good ecological status or potential. River basin planning allows us to plan improvements for particular parameters over time. We have collaborated with others to identify measures which will act to protect or improve our water environment in order that all water bodies reach good status over successive RBMP cycles.

The following table shows our collated information on the pressures on this water body, their causes and the measures which could be introduced to mitigate their effects. We have also indicated the current funding status of the measure; with projected measures being potentially funded and agreed measures having funding in place. Finally, we have included information on the potential or actual owner of the measure, the date it will be effective and information on the justification for extending the deadlines or for setting an alternative objective, where appropriate.

Pressure	As a Result of	Assessment Parameter	Objective	Reasons for Failure
	Measure	Funding	Owner	Effective date
Diffuse Source Pollution	Arable farming	Phosphorus	Moderate by 2015	Implementation of the measure by an earlier deadline would impose disproportionate burdens
	Non-urban land management measures	Projected	Farmer(s)	31/12/2020
Abstraction	Arable farming	Change from natural flow conditions	Moderate by 2015	Implementation of the measure by an earlier deadline would impose disproportionate burdens
	Control Abstraction	Neither Agreed nor Projected	Farmer(s)	31/12/2020
Abstraction	Arable farming	Depletion of base flow from GW body	Not yet set	

Footnote – These results show current classification but the measures, pressures and objectives shown may not yet align to these classification results. Please contact rbmp@sepa.org.uk if you require further information on this water body.

Future work

Additional work to identify pressures and to develop and implement measures to mitigate their impacts will continue over subsequent river basin cycles.

Complete classification for this water body in 2012

Parameter	Status	Confidence of Class
OVERALL STATUS	MODERATE	HIGH
Pre-HMWB status	Moderate	High
Overall chemistry	Pass	High
Priority substances	Pass	High
Benzo-a-pyrene	Pass	High
Anthracene	Pass	High
Atrazine	Pass	Low
Benzo-(B+K)-Fluoranthene	Pass	High
Cadmium	Pass	Low
Chlorpyrifos	Pass	Low
Fluoranthene	Pass	High
Hexachlorobenzene	Pass	Low
Isoproturon	Pass	High
Lead	Pass	Low
Naphthalene	Pass	High
Nickel	Pass	Low
pp-DDT	Pass	Low
Simazine	Pass	Low
Trifluralin	Pass	Low
Endosulfan	Pass	Low
Total HCH	Pass	Low
Diethylhexylphthalate (DEHP)	Pass	High
Chlorfenvinphos	Pass	Low
Total Drins	Pass	Low
Diuron	Pass	High
Mercury	Pass	Low
Total DDT	Pass	Low
Overall ecology	Moderate	High

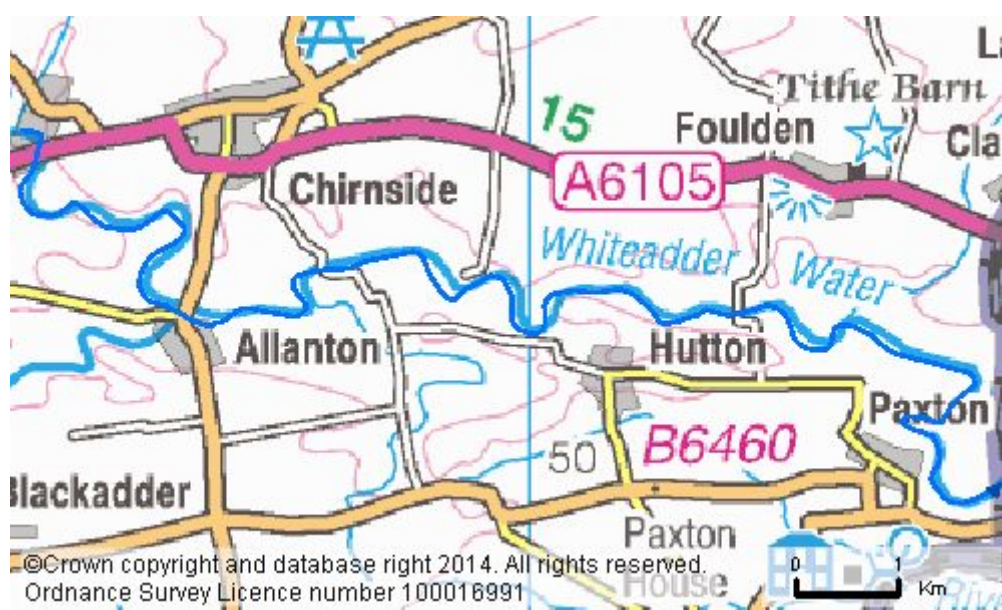

Water body information sheet for water
body 6844 in Tweed

Parameter	Status	Confidence of Class
Physico-Chem	Good	Medium
Temperature	Good	Medium
Soluble reactive phosphorus	High	High
pH	High	High
Dissolved Oxygen	High	High
Biological elements	Moderate	High
Phytobenthos	Moderate	High
Macrophytes	Good	High
Benthic invertebrates	Good	High
Macro-invertebrates (acid)	High	Low
Macro-invertebrates (RiCT)	Good	High
Macro-invertebrates (ASPT)	Good	High
Macro-invertebrates (NTAXA)	High	High
Alien species	High	Low
Fish	High	Medium
Fish ecology	High	Medium
Fish barrier	High	Medium
Specific pollutants	Pass	High
Arsenic	Pass	Low
Diazinon	Pass	Low
Linuron	Pass	High
Permethrin	Pass	Low
Iron	Pass	Low
Copper	Pass	Low
Zinc	Pass	High
Dimethoate	Pass	Low
2,4-D	Pass	High
Mecoprop	Pass	High
Ammonium	Pass	High
Chromium	Pass	Low
Hydromorphology	Moderate	Medium
Morphology	Good	Medium
Hydrology	Moderate	Medium
Hydrology (impoundment)	Good	Medium

Parameter	Status	Confidence of Class
Hydrology (abstraction)	Moderate	Medium
Regulatory BOD	High	High
Regulatory ammonium	High	High
Water quality	Moderate	High
Morphological pressures	Good	Medium

Location of this water body

You can find the geographical location of this water body by searching on water body ID in the interactive maps at www.sepa.org.uk/water/river_basin_planning.aspx
